OPENTRACK: Simulation of complex nodes

Case Studies in Italy

Zurich, 21st January 2010

LABORATORIO DI INGEGNERIA FERROVIARIA E TRAFFICO

University of Trieste

About Us

- Important railway university in Italy
- OT Users since 2004
- Spin-off since 2007
- Close Cooperation with RFI

- FOCUS:
 - Railway traffic studies
 - Simulation of large networks
 - Software development

References

- Stochastic micro-simulation in large nodes
 - Roma, Firenze, Torino, Milano, Venezia, Napoli...
- Infrastructure improvement evaluation
 - Roma - Pescara, Venezia, Roma, Milano, Corridor X...
- Functional design and capacity evaluation
 - Ferrocarril Transandino (ARG-CHI)
- Temporary timetables during maintenance or improvement works
 - Bologna - Firenze, Salerno, Milano - Treviglio, Roma, Palermo...

A Case Study: Milano

- Timetable validation (2008/09):
 - New HSL Milano - Bologna
 - New services
 - Impact within the nodes ?

Delay Analysis and Model Validation

- Analysis of 100 days
- Point out critical sections and trains
- Check corresponding timetable graph

Delay Analysis and Model Validation

- Analysis of 100 days
- Point out critical sections and trains
- Check corresponding timetable graph
- Initial delays
- Stop time variability
- Timetable

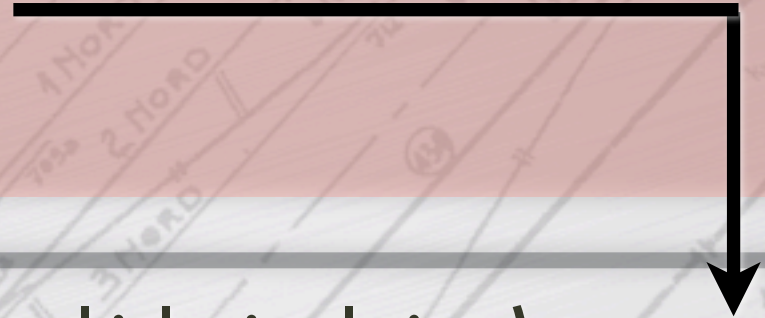

Delay Analysis and Model Validation

- Analysis of 100 days
- Point out critical sections and trains
- Check corresponding timetable graph

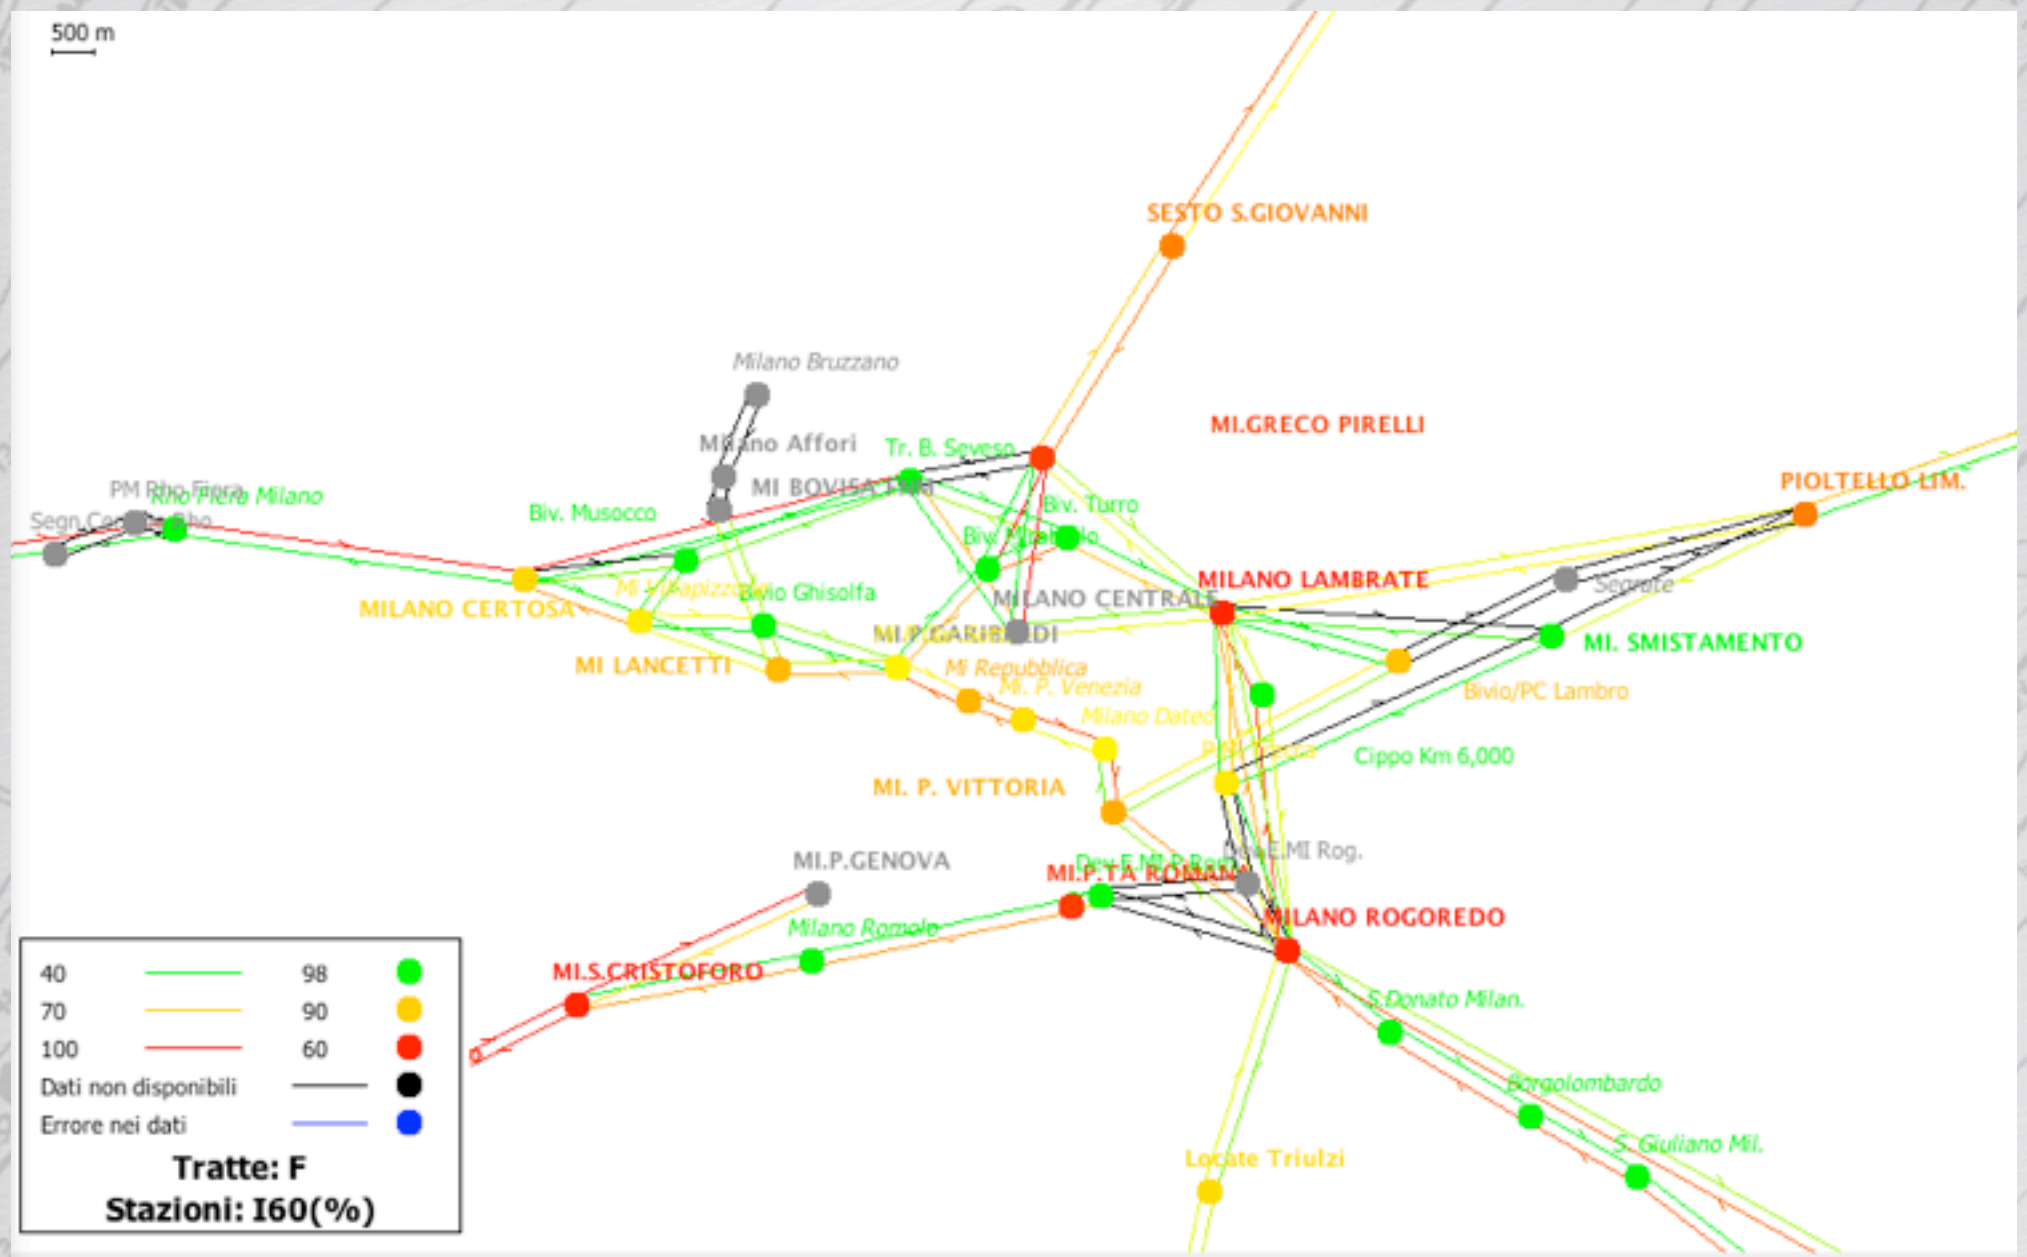

- Initial delays
- Stop time variability
- Timetable

- Simulation and comparison of results (multiple simulations):
 - Calibration: Train movement, Itineraries, Dispatching, interlocking rules...

Network analyzer

Corridor view

Scenarios and simulation

Scenarios

- Past distributions
- Doubled delays for all trains
- Doubled delays for selected train families
- Impact of different priorities

Scenarios and simulation

Scenarios

- Past distributions
- Doubled delays for all trains
- Doubled delays for selected train families
- Impact of different priorities

OPEN TRACK

Scenarios and simulation

Scenarios

- Past distributions
- Doubled delays for all trains
- Doubled delays for selected train families
- Impact of different priorities

OPEN TRACK

- Comparison 2008 - 2009
- Point out weaknesses in 2009
- Check corresponding timetable graph
- Evaluation of the Impact of higher delays
- Evaluation of the Impact of different itineraries/priorities

Results....

- 2009 timetable more robust than 2008
- Higher punctuality
- But:
 - Smart use of possible itineraries
 - Priority to HS trains $< 3'$
 - Definition of dispatching rules, priority to trains to Verona
 - For Even HS trains, very important punctuality before Bologna

....and in the real world?

Mean punctuality +3% than forecasted (lower initial delays)

Conclusions

- OT useful to support decisions on wide range of problems
- OT works also on large networks
- But:
 - Importance of model calibration (field measurements)
 - Experience in railway operations required to avoid macro and minor mistakes
